

Graphic Planning

Jeeves Information Systems AB Box 1042 SE-101 38 Stockholm Tel: +46 8 587 099 00 Fax: +46 8 587 099 99 e-mail: info@jeeves.se www.jeeves.se

Jeeves Graphic Planning is for companies who need an efficient tool for planning time and resources. The graphic planning tool solves the problem of insufficient overview and the difficulty of seeing the consequences of bookings against capacity.

In contrast to most other business systems, Jeeves Graphic Planning contains broad graphic planning functionality. It provides good control over planned activities, resource usage and bookings. It also makes it possible to simulate various planning situations. Jeeves Graphic Planning has several planning windows which show the information in an easy-to-understand way.

Completely integrated to Jeeves, but can also be used stand-alone:

Delivered with three ready templates – production, service and time and project:

”Predecessor” and ”Successors”:

Re-plan with drag-and-drop:

Activity tree with any number of levels:

Many different ways to view bookings:

Booking graph:

Bottle-neck analysis:

Two versions with or without planning possibility:

Plan any type of business which assigns time and resources. The tool manages the planning of both project work and production. This means that only one tool is needed for all time and resource planning.

Well-proven templates within the largest application areas, means that you get started quickly without consulting costs. Using them as a starting point and making additions is very easy.

Possible to control the relationship between two activities and choose if they should overlap. Easier to avoid planning errors and impossible planning.

Gives an overview of consequences. It's possible to re-plan right in the planning window which reduce the time spent planning.

Works for all types of business. Changes to lower hierarchical levels are reflected upwards, which makes it easier to see consequences.

Shows booking level per resource or many resources at the same time. The view suits many roles and makes it easier for everyone to understand the planning situation.

Show booking level against capacity. Lets you know if the resource is being used effectively and therefore helps to plan work for that resource.

Shows resources sorted according to booking level. Focuses on problem areas and provides the tool to optimally use your resources.

Everyone who requires access to planning information can get it, without the quality of the planning work being compromised. Low-cost way of letting everyone share the information.
